**Comments:** Manufacturer's Resolution is taken as Precision; Maintained by ship.

## Atmospheric CO2

**Measured/Frequency:** Yes, 5 readings in a group every 3.4 hours

**Intake Location:** Mast above the bridge, ~18 meters above sea surface

**Drying Method:** Gas stream passes through a thermoelectric condenser (~5 °C) and then through a Perma Pure (Nafion) dryer before reaching the analyzer (90% dry).

**Atmospheric CO2 Accuracy:**  $\pm 0.5 \mu\text{atm}$  in fCO<sub>2</sub>\_ATM

**Atmospheric CO2 Precision:**  $\pm 0.01 \mu\text{atm}$  in fCO<sub>2</sub>\_ATM

## Aqueous CO2 Equilibrator Design

**System Manufacturer:**

**Intake Depth:** 3 meters

**Intake Location:** Bow

**Equilibration Type:** Spray head above dynamic pool with thermal jacket

**Equilibrator Volume (L):** 0.95 L (0.4 L water, 0.55 L headspace)

**Headspace Gas Flow Rate (ml/min):** 70 - 150 ml/min

**Equilibrator Water Flow Rate (L/min):** 1.5 - 2.0 L/min

**Equilibrator Vented:** Yes

**Equilibration Comments:** Primary equilibrator is vented through a secondary equilibrator.

**Drying Method:** Gas stream passes through a thermoelectric condenser (~5 °C) and then through a Perma Pure (Nafion) dryer before reaching the analyzer (90% dry).

## Aqueous CO2 Sensor Details

**Measurement Method:** IR

**Method details:** details of CO<sub>2</sub> sensing (not required)

**Manufacturer:** LI-COR

**Model:** 6262

**Measured CO2 Values:** xco<sub>2</sub>(dry)

**Measurement Frequency:** Every 140 seconds, except during calibration

**Aqueous CO2 Accuracy:**  $\pm 2 \mu\text{atm}$  in fCO<sub>2</sub>\_SW

**Aqueous CO2 Precision:**  $\pm 0.01 \mu\text{atm}$  in fCO<sub>2</sub>\_SW

**Sensor Calibrations:**

**Calibration of Calibration Gases:** The analyzer is calibrated every 3.4 hours with field standards that in turn were calibrated with primary standards that are directly traceable to the WMO scale. The zero gas is ultra-high purity air.

**Number Non-Zero Gas Standards:** 4

**Calibration Gases:**

Std 1: JA02166, 232.80 ppm, owned by AOML, used every 4.5 hours.

Std 2: JB03651, 306.46 ppm, owned by AOML, used every 4.5 hours.

Std 3: JB03591, 409.69 ppm, owned by AOML, used every 4.5 hours.

Std 4: JB03285, 565.58 ppm, owned by AOML, used every 4.5 hours.

Std 5: 0.00 ppm, owned by AOML, used every ~24 hours.

**Comparison to Other CO2 Analyses:**

**Comments:**

## Equilibrator Temperature Sensor

**Location:** Inserted into equilibrator ~5 cm below water level

**Manufacturer:** Hart

**Model:** 1523

**Accuracy:**  $\pm 0.015$  ( $^{\circ}\text{C}$  if units not given)

**Precision:** 0.0003 ( $^{\circ}\text{C}$  if units not given)

**Calibration:** Factory calibration

**Comments:** Resolution is taken as Precision.

**Equilibrator  
Pressure Sensor**

**Location:** Attached to equilibrator headspace. Differential pressure reading from Setra 239 attached to the equilibrator headspace is added to the pressure reading from the LICOR, which is measured by an external Setra 270 connected to the exit of the analyzer.

**Manufacturer:** Setra

**Model:** 270

**Accuracy:**  $\pm 0.15$  (hPa if units not given)

**Precision:** 0.015 (hPa if units not given)

**Calibration:** Factory calibration

**Comments:** Manufacturer's Resolution is taken as Precision.

**Additional  
Information**

**Suggested QC flag from Data Provider:** NA

**Additional Comments:** The analytical system behaved well throughout the cruise. Because of the instability of the barometric pressure sensor, the outside atmospheric pressure at sea surface was estimated by subtracting 1.29 mbar from the LICOR pressure.
